SKAL certification

A step forward in sustainable and responsible business

The Floral Connection has recently obtained SKAL certification for organic products: preparation, distribution/placing on the market, and storage of organic flowers and plants. This certification confirms that our processes comply with strict European regulations for organic production and processing. It ensures transparency and reliability throughout our supply chain, from procurement to delivery, and supports the expansion of our sustainable product offering for retail.

This step aligns directly with IMPACT2030, particularly within the pillars of climate, environment and responsible business conduct. Organic products are grown with attention to soil health, biodiversity and reducing the use of chemical crop protection. By offering certified organic products, we contribute to a more sustainable supply chain and enable consumers to make more conscious choices.

Results

- Official SKAL certification for organic products
- Transparent and controlled supply chain
- Expansion of a more sustainable assortment of flowers and plants for our retail customers
- Frontrunner in organic flowers and plants for retail

Lesson for other companies

Achieving certification requires clear processes, internal awareness and close collaboration with suppliers. By organising the process step by step – from documentation to audits – certification proves to be both achievable and scalable.

Why relevant for other DFG companies?
This trajectory shows that organic certification not only contributes to sustainability. Despite the currently limited supply, it also creates new market opportunities for the future. Our collaboration with Coloriginz in exploring market availability provided valuable insights and opportunities. By sharing experiences and best practices, other companies within the group can accelerate this process and increase our collective impact.
